

G50.Golf Platform – V1 Product Specification

Purpose

This document defines the minimum viable Version 1 product for the G50 Golf Management & Booking Platform. It replaces the generic “Gym CRM” terminology and defines the system specifically around G50.Golf’s multi-location golf coaching and development model.

The objective of V1 is to create a scalable platform that allows G50 HQ to manage the network while giving individual locations sufficient control over their own coaches, schedules, bookings and customers.

Core Architecture

The platform must be built as a multi-location system with four primary user levels:

- G50 HQ Admin – controls the overall ecosystem.
- Location Admin – manages an individual G50 location.
- Coach/Staff – manages assigned schedules, sessions, clients and attendance.
- Golfer/Customer – manages their profile, purchases and bookings.

Permissions must be role-based so users only access the locations and functions relevant to them.

1. Locations

HQ must be able to create, edit, activate and deactivate locations.

Each location should contain:

- Location name
- Address and contact details
- Opening/operating information
- Location image/logo where applicable
- Coaches and staff
- Available classes and appointments
- Local schedules
- Local pricing where permitted
- Members/customers
- Bookings
- Revenue and reporting

Each location should be capable of having its own public-facing booking page/URL.

2. Service Structure

V1 must distinguish between two fundamentally different service types.

A. Classes / Group Sessions

Examples include Driver, Long Game, Short Game, Putting, Bunkers, Ladies, Juniors and other G50 group sessions.

A class must support:

- Name and description
- Category
- Duration
- Capacity
- Standard price
- Member price where applicable
- Assigned location(s)
- Assigned coach(es)
- Recurring schedule
- One-off schedule
- Active/inactive status
- Booking rules
- Add buffer time before or after service

B. Appointments / Individual Services

Examples include 1:1 Coaching, T3 Assessment, Golf Fitness, Club Fitting, Physio and other appointment-based services.

Appointments must support:

- Service name and description
- Duration
- Price
- Assigned coach/provider
- Assigned location
- Coach availability
- Booking intervals
- Add buffer time before or after service
- Active/inactive status

Classes and appointments must use separate scheduling and availability logic.

3. HQ Service Templates

This is a core V1 requirement.

G50 HQ must be able to create master service templates that locations can activate rather than rebuilding services independently.

Example:

G50 HQ creates “G50 Driver Session” → Twin Waters activates it → assigns Jon Kennedy → sets Tuesday 4:00pm → confirms local price/capacity.

HQ templates should contain default name, description, category, duration, capacity, image and default pricing.

Locations may override fields specifically permitted by HQ, such as schedule, coach and local price.

This structure must allow new G50 locations to be deployed quickly and consistently.

4. Scheduling

The system must support:

- Recurring class schedules
- One-off sessions
- Appointment availability
- Coach-specific availability
- Location-specific availability
- Time off/unavailable periods
- Schedule changes
- Session cancellation
- Rescheduling
- Buffer times if required

The system must prevent coach double-booking across classes and appointments.

5. Coaches and Staff

HQ or authorised Location Admins must be able to create staff accounts and assign roles and locations.

Coach profiles should support:

- Name and profile details
- Location(s)
- Services/classes delivered
- Availability
- Upcoming schedule
- Assigned clients where applicable

- Attendance management

A coach working at multiple locations must use one account rather than duplicate accounts.

6. Customer Accounts

Each golfer must have one G50 account capable of operating across the G50 network according to their membership/access rights.

Customer profiles should include:

- Personal/contact details
- Home/preferred location
- Membership
- Packages/credits
- Upcoming bookings
- Booking history
- Attendance history
- Payment history
- Account status

The architecture should allow additional golfer-development information to be added later without rebuilding the customer model.

7. Memberships

V1 must support multiple membership types and rules.

The system architecture should support structures such as:

- Free / PAYG
- Location Membership
- G50 Global Membership
- Junior / Performance membership
- Corporate or other future membership types

Membership rules must be configurable and capable of controlling:

- Membership price
- Billing period
- Start/end date
- Auto-renewal where supported
- Location access
- Cross-location access
- Member pricing/discounts
- Booking windows
- Included sessions or credits

- Membership status

Membership rules should be configuration-driven rather than hard-coded.

8. Packages and Credits

V1 must include a credit/package system.

Example workflow:

Customer purchases five G50 sessions → five credits are added → booking uses one credit → valid cancellation returns the credit → late cancellation/no-show may forfeit the credit according to policy.

The system must support:

- Credit/package purchase
- Credit balance
- Expiry date if applicable
- Eligible service types
- Credit redemption
- Credit return after eligible cancellation
- Manual adjustment by authorised admin
- Transaction history

9. Booking Engine

Customer booking flow should be simple and mobile-first:

Find/select location → choose Classes or Appointments → choose service → view availability → choose date/time → login/register if required → membership/package/payment validation → confirm booking.

The system must:

- Display remaining class capacity (toggle on or off)
- Prevent overbooking
- Validate membership/credit eligibility
- Apply correct pricing
- Prevent conflicting bookings where appropriate
- Record booking status
- Issue confirmation

Customers must be able to view, cancel and reschedule bookings subject to G50 rules.

10. Waitlist

Waitlists are required in V1 for capacity-based classes.

When a class is full, an eligible golfer should be able to join the waitlist.

The system should record waitlist order and notify eligible customers when a place becomes available.

V1 may use a notification/claim process rather than fully automatic booking, provided the architecture allows automatic promotion later.

11. Attendance

Coaches and authorised staff must be able to open a scheduled class and quickly mark customers as:

- Attended
- Absent
- Late cancellation/no-show where applicable

Attendance must be recorded against the customer and booking and be available for reporting.

12. Staff/Coach Experience

V1 must provide a simplified mobile-responsive staff interface.

A coach should be able to log in and immediately see:

- Today's schedule
- Upcoming sessions/appointments
- Capacity and booked numbers
- Customer names
- Relevant customer information
- Attendance controls

The coach should not need access to the full HQ CRM to perform everyday coaching tasks.

The V1 interface may be a responsive web app/PWA. Native iOS/Android staff applications are not required for initial launch provided the architecture supports them later.

13. Customer Experience

The customer interface must be designed primarily for mobile use.

Customers should be able to:

- Find/select a location
- Browse classes

- Browse appointments
- View availability
- Book
- Join waitlists
- Buy eligible memberships/packages
- View credits
- View upcoming bookings
- Cancel/reschedule where permitted
- View booking history
- Manage their profile

A responsive web app/PWA is acceptable for V1. Native applications can follow after the core platform is proven.

14. Payments

V1 must support secure online payment integration.

The system should support:

- PAYG class payments
- Appointment payments
- Membership payments
- Package purchases
- Payment status
- Refunds where authorised
- Receipts/invoices
- Payment history
- Location-level revenue reporting

Payment card information should be handled by the selected payment provider rather than stored directly by G50.

15. Notifications

V1 should support transactional email notifications for:

- Booking confirmation
- Booking reminder
- Cancellation
- Rescheduling/schedule change
- Waitlist availability
- Payment confirmation
- Membership/package confirmation
- Membership expiry/renewal where applicable

The architecture should allow SMS and push notifications to be added later.

16. Reporting and Dashboard

HQ Dashboard should provide network-level visibility including:

- Locations
- Active customers/members
- Bookings
- Attendance
- Class utilisation
- Revenue
- Memberships/packages
- Coach activity

Location Admin dashboards should show equivalent information limited to their location(s).

Reports should be filterable by location, date, class/service, coach and customer where relevant.

Data should be exportable in CSV format.

17. Admin Hierarchy

G50 HQ

Controls locations, global service templates, membership architecture, system-wide permissions/settings and network reporting.

Location Admin

Controls permitted local settings, coaches/staff, schedules, local pricing where permitted, bookings, customers and local reporting.

Coach/Staff

Controls their permitted schedule/availability, assigned sessions, attendance and relevant customer information.

Golfer/Customer

Controls their own profile, purchases, memberships/packages and bookings.

18. Key V1 System Rules

- One customer account should work across eligible G50 locations.
- One coach account should work across multiple assigned locations.
- Role permissions must restrict access appropriately.
- Location data must be logically separated while remaining visible to authorised HQ users.

- Capacity must be enforced server-side to prevent overbooking.
- Coach scheduling must prevent double-booking.
- Membership, package and pricing rules must be configurable.
- Booking, payment and credit transactions must maintain an auditable history.
- The platform must be responsive and usable on desktop, tablet and mobile.

19. V1 Customer Workflow

Discover G50/location → select location → choose class or appointment → choose service → select availability → login/register → validate membership/package/payment → book → receive confirmation/reminder → attend → attendance recorded → booking remains in customer history.

20. V1 Staff Workflow

Login → view assigned location/schedule → open class/appointment → view booked customers → manage booking where authorised → record attendance → return to schedule.

21. V1 Location Admin Workflow

Login → view location dashboard → manage coaches/staff → activate HQ service templates → create schedules → manage customers/bookings → manage permitted pricing → review attendance/payments/reports.

22. V1 HQ Workflow

Login → view network dashboard → create/manage locations → create global templates → configure membership/package rules → manage permissions → view network customers/bookings/revenue → manage global settings and reporting.

23. Explicitly Outside V1

To keep the first release focused, the following should not be required for initial launch unless separately agreed:

- Native iOS/Android applications
- Full marketing CRM/email campaign builder
- AI recommendations
- G50 T3 performance testing and golfer-development engine
- Advanced loyalty/gamification
- Coach payroll/commission engine
- Club fitting inventory/e-commerce
- Advanced automated marketing
- Social/community functionality
- Complex corporate account management

The database and API architecture should, however, allow these capabilities to be added later.

24. Technical/Architecture Requirements

The development team should propose the technical stack, but V1 must be designed for future scale rather than as a single-location application.

Required principles:

- Multi-location architecture
- Role-based access control
- Secure authentication
- API-first/modular architecture where practical
- Responsive front end
- Secure payment-provider integration
- Reliable booking concurrency/capacity controls
- Audit history for critical financial/booking actions
- Data export capability
- Backup/recovery strategy
- Appropriate Australian privacy/data handling considerations

25. V1 Acceptance Criteria

V1 should not be considered complete until G50 can demonstrate the complete end-to-end process:

HQ creates a location and master service → Location Admin activates the service and schedules it with a coach → golfer creates an account → golfer purchases or uses the appropriate payment/membership/package → golfer books → capacity updates correctly → golfer receives confirmation → coach sees the golfer on their schedule → coach records attendance → booking/payment/attendance appears correctly in customer, location and HQ reporting.

A second test must confirm that a full class accepts a waitlist entry and that a cancellation makes the place available through the defined waitlist process.

A third test must confirm that the same golfer and coach accounts can operate correctly across multiple eligible locations without duplication.

26. Development Deliverables Required Before Build Approval

Before full development begins, the developer should return:

- Confirmed V1 scope against this specification
- Proposed database/entity structure
- User-role and permissions matrix

- Customer booking flow/wireframes
- Staff/coach flow/wireframes
- Location Admin flow/wireframes
- HQ Admin flow/wireframes
- Proposed technology stack
- Payment integration proposal
- Notification approach
- API/integration approach
- Hosting/security/backup approach
- Development milestones
- Testing/UAT plan

The purpose is to ensure the system architecture and user flows are agreed before substantial coding begins.

G50.Golf V1 Product Principle

The platform should not simply recreate a gym booking system with golf terminology. It should establish the operating system for a scalable G50 network: centrally controlled by G50 HQ, locally manageable by each location, simple for coaches to operate and exceptionally easy for golfers to book and use.
